

KempSmart i Alkaline Water Ionizer

Alkaline Water Ionizer of the Year

With up to 70% of our body made of water, it's no wonder we are often recommended to drink at least 8 glasses of water every day. This not only keeps our bodies hydrated, but also ensures that our bodily systems are shipshape for overall well-being.

Water may be wonderful, but do you know that not all water is created the same? There are different types of water: distilled, spring water, natural mineral water, and even alkaline ionized water.

So where does our award winner, the KempSmart i Alkaline Water Ionizer, come in? Well, the idea of drinking alkaline ionized water is not new. In fact, it all came about because there were studies to suggest that alkaline ionized water is beneficial for both health and medical use.

Today, the alkaline water revolution has picked up momentum in Asia and America—more than 30 million people in Japan alone has access to ionized water from home units or other sources. The reason for alkaline ionized water's popularity is simple: it's said to be able to help the human body achieve a natural pH balance.

As the pioneer and leader in alkaline water technology, Kemp Singapore is ever on the ball to create better machines to produce safe and healthy water for consumption. The KempSmart i Alkaline Water Ionizer is one such machine. In fact, it's considered by researchers to be a remarkable breakthrough in alkaline technology due to its SMART technology's ability to cope with a wider variation of water sources.

K KEMP SINGAPORE
Pioneer and Leader in Alkaline Water Since 1988

10 Anson Road, #02-86 International Plaza (Tanjong Pagar MRT Station),
Singapore 079903. Tel: 6272 5337

The machine is also equipped with the US KDF 55 filtration system, which is designed to remove water-soluble heavy metals (e.g. mercury and lead), scale, bacteria, and algae. What you get from the machine is water that is not only safe to drink, but is also enriched with activated hydrogen and an optimum level of Oxidation-Reduction Potential (ORP)—all thanks to the high quality titanium-platinum plates installed within.

Why We Recommend It:

Water ionizers can be rather bulky and a sore sight in the kitchen décor. But we like that Kemp Singapore has given us a sleek range of designs that look good on the countertop or under the sink. The list of smart technologies at your fingertip also makes the KempSmart i Alkaline Water Ionizer an absolute breeze to use.
